OILED PALLETES

act better

BUT -

Everyone's been
waiting - - and
waiting - for a
foolproof oiler

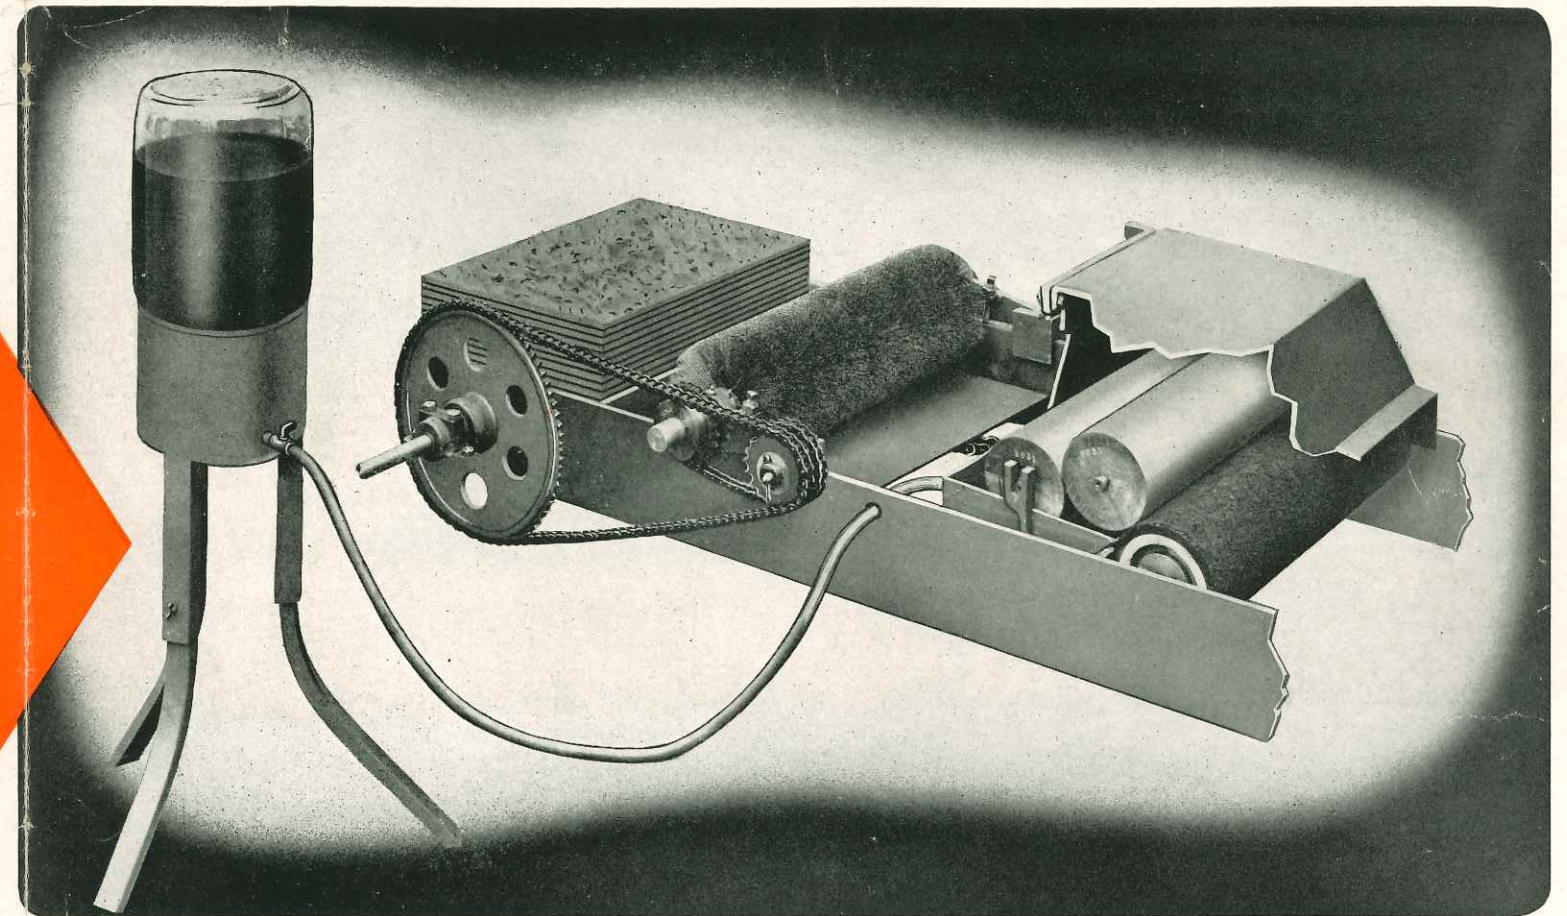

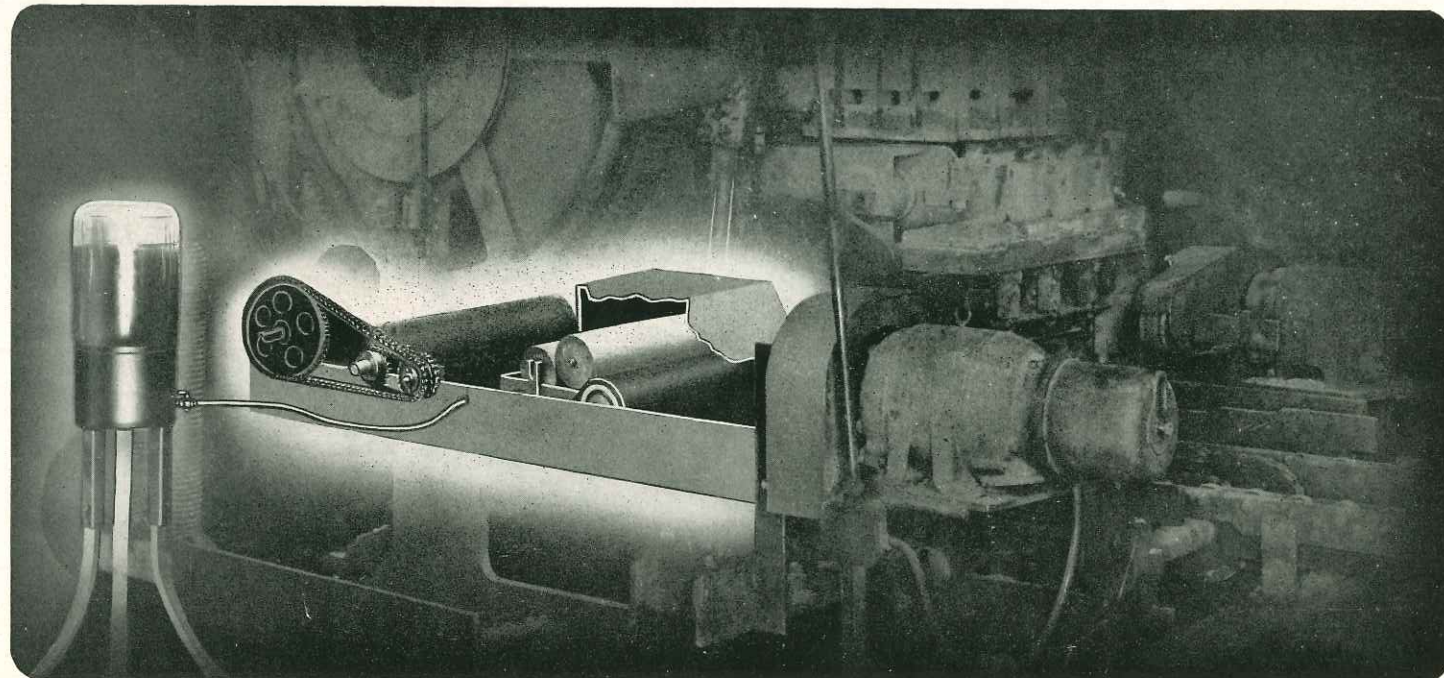

NOW — ANOTHER B.M.T. FIRST !!

SIMPLE, EFFECTIVE PALLET OILING — —

Hard-headed production men in the concrete block industry — men who demand the *right* answer—have known for years that OILED pallets are BETTER pallets. They've watched breakage nose-dive with blocks that slide off pallets like butter off a hot knife. They've seen how building contractors gobble up the sharper-edged, smoother blocks turned out on oiled pallets. They've counted up the dollars saved by rust-free pallets, pallets that last years longer!

BUT — They also know of the headaches of

the average pallet oiler. They've watched production lines grind to a halt too often — costly delays incurred—all because of clogged spray guns. Worse yet, they've witnessed how clogged guns often stay clogged, producing unsprayed pallets that clutch finish blocks with the grip of a Superman thereby preventing drainage of water from cores during curing periods. They've shaken their heads, too, at the high oil consumption of the drip-vibration method — and groaned at the messiness (and cost) of the "let's-drop-a-lot-on-and-wipe-some-off" approach.

... **Bergen comes up with the right answer AGAIN**

The new B.M.T. PALLET OILER is the kind of machine that makes other people say, "Why didn't we think of that?" It's that simple—that trouble-free! *No* spray guns—*no* compressed air—*no* oil fumes—*no* motors to break down—*little* or *no* water remaining in the cores of cured blocks — oil consumption only when pallets are in oiling position! Just think—only four moving parts. That's why production men laugh about "maintenance" once they install B.M.T. Pallet Oilers. These practical men know a good thing when they see it — and they've seen it. That's why, all over the country, you'll see more and more installations of the new B.M.T. PALLET OILER.

- No Spray Guns!
- No Oil Fumes!
- No Motors!
- No Compressed Air!
- Quickly Installed!
- Simple Operation!
- Extra-Low Oil Consumption!
- No Shut-Down Delays!
- Negligible Maintenance Costs!

3/7/50 - Dept - Bergen Mach. & Tool Co.

ECONOMICAL TO INSTALL -- EVEN MORE ECONOMICAL TO OPERATE

Operation and Specification Details

- Designed for use with 26" pallets.
- One 8" dia. x 26" steel brush — removes all loose concrete from pallet before it passes under oiling roller. Derives its power from the block-making machine itself.
- Three hardwood rollers—rotate only when a pallet comes in contact with the oiling roller.
- One five-gallon glass bottle with stand and reservoir—employs same principle as drinking water cooler by inverting bottle.
- A removable oil tank.
- Consumes approximately one gallon of oil per hour.
- Thin, even film of oil permits reversing of pallets, thereby oiling both sides.
- The B.M.T. PALLET OILER comes complete, ready to install with all necessary chains, sprockets, bearings, shafts, pulleys, etc. Burning two small notches and drilling one hole in magazine side plates is only machine work required.

***There's a B.M.T. PALLET OILER Ready for YOUR Production Line . . .
Ready to Turn Out Oiled Pallets Faster . . . Cheaper . . . Cleaner. Write
